THE ICELANDIC HORSE

The Icelandic horse descends from horses brought to Iceland by the first settlers. These horses came from Norway, Ireland and the British Isles. Some of the horses were also brought from Scandinavia and Europe in the 10th century. The Icelandic horse has been isolated from other breeds of horses since the Althing, the National Assembly, banned the importation of horses to Iceland in the year 982. Since then, the Icelandic horse has developed in the harsh climate of Iceland, where it has had to survive on its own. Its ancestors have been living in Iceland for more than a thousand years. The Icelandic horse is a direct descendant of the horses that the first settlers brought to Iceland.

The Icelandic horse has been selectively bred with harsh natural selection meaning pretty much survival of the fittest.

During the centuries of isolation (1000AD - 1900AD), Icelandic horses were used for all kinds of work, such as transportation, ploughing, and as a source of food. Because of the harsh environment and the scarcity of fodder, only the strongest and healthiest animals survived. The Icelandic horse developed into a unique breed with great stamina and endurance, and the ability to withstand the extreme cold and harsh conditions of the Icelandic winter.

THE NUMBER OF HORSES

The number of horses in Iceland has been rising for the past few years. In 2017 there were 77,500 horses in Iceland, and 52,000 of them were registered with the Icelandic Horse Farmers Association. Of the registered horses, 39,000 were over the age of 4 years old. Approximately 80,000 Icelandic horses live outside of Iceland, and the number of Icelandic horses abroad has been relatively stable for the past few years.

The population that crosses the boundaries of the Icelandic horse's habitat is relatively small. Only 1% of the horses in Iceland are exported each year. Most of the horses that are exported are sold to Germany, Switzerland, Sweden, Finland, or Scandinavia. A small number of horses are also exported to the United States, Canada, and Japan.

EXPORTATION

Exportation of horses from Iceland has been relatively stable for the past few years. Most of the horses that are exported are sold to Germany, Switzerland, Sweden, Finland, or Scandinavia. A small number of horses are also exported to the United States, Canada, and Japan. The exportation of horses from Iceland has been relatively stable for the past few years.
